

Technical info for presenters:

SoNu's technical requirements vary depending on the repertoire to be performed. A list of things which will be required of the presenters/venues of virtually all shows consists of the following:

A sound engineer familiar with the in-house equipment.

A PA system with 2 or 3 monitors, depending on the acoustic situation of the room/stage area.

6 XLR Cables for our three mixers to go to the in-house mixer (in rare instances we may have fewer mixers).

1 table, approximately 3' x 5'.

3-6 music stands.

In some cases (particularly when we are far from home), we may require some of the following (please check with us at contact@sonusound.org):

A drumset

Microphones and stands for percussion setups (some mics possibly split, so that they may simultaneously be sent to the house and used for processing onstage).
